21 November 1962

MEMORANDUM FOR THE RECORD:

25X1A

SUBJECT: Meeting with [ ]

25X1A

25X1A

25X1A

1. On 21 November 1962, a meeting was held with persons from [ ]  
[ ] Attending from [ ] were [ ] and [ ]  
[ ] NPIC personnel attending were [ ]  
[ ] and [ ] The purpose of the  
meeting was to determine precisely what materials and data [ ]  
needed to reduce pitch, roll and yaw from stellar exposures.

25X1A

25X1A

25X1A

2. The following was established:

25X1A

25X1A

a. [ ] is to send original stellar photos as soon as possible.

b. NPIC will send "best-guess" and binary time of stellar exposures correlated to Greenwich Civil Time.

25X1A c. Calibration information of the stellar camera to be sent to [ ] when it is available.

3. To date, we have not received calibration data of the stellar camera. In fact, the calibration data of the framing camera is always received at least a month after the missions have been processed. Getting the stellar calibration data to [ ] without unreasonable delay presents a problem that will not be easily resolved. It was suggested that the patio exposures made by [ ] prior HATS test and IMSC post HATS be sent to [ ] who can do their own calibration reduction.
